

Monitoring and Evaluation (M&E) for Preventing Violent Extremism (PVE)

CAPABILITY STATEMENT

Conflict Management Consulting is a recognised expert team in preventing and counter-ing violent extremism (P/CVE) research. Our unique niche expertise, specialising in field-based monitoring and evaluation for P/CVE, is delivered by our in-house experts and senior full-time staff. We actively support major donors and implementors, maximising their impact and ensuring value for money by capturing and telling the local stories that count

Examples of our work

- Conducting large scale, often nation-wide research and quantitative studies, most recently in Syria, Nigeria, Myanmar and Pakistan
- Conducting real-time monitoring of grievances and perceptions of VE groups in West Africa
- Designing and implementing M&E systems for PVE, CVE and CT interventions, e.g. for a donor's support to CT in 10 MENA countries
- Providing long-term support in audience insight and evaluation, e.g. in Syria
- Deploying teams in fragile and conflict-affected states in a gender- and conflict-sensitive manner, such as in Somalia and Somaliland
- Closely cooperating with local partners in 17 countries where we currently work
- Conducting external independent evaluations, such as the evaluation of the EU's STRIVE Horn of Africa project
- Providing training to national and international experts, international organisations and non-profits engaging in P/CVE
- Visualising data and findings in innovative and easy-to-access ways, such as online platforms.

Monitoring interventions and evaluating the results provides agencies working on PVE implementation with an essential check on the validity of their data, the performance of their programs and the overall quality of their efforts. M&E enables them to:

- Demonstrate to recipient communities and governments the difference that PVE intervention makes,
- Show international funders the effect of their contributions,
- Harvest evidence-based knowledge to improve future PVE programming,
- Contribute solid, clear lessons-learned to the global PVE community.

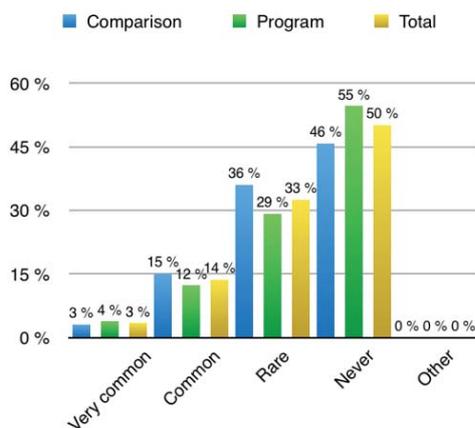

EXAMPLES OF OUR WORK

Voices from Mosul

What were the most difficult things under ISIS?

Karachi, Pakistan: Support to violent extremist groups

Perception of frequency of people in area accepting use of violence to achieve social, political, or religious goals by group affiliation (program/comparison)

n=5804. Pearson chi2(4) = 53.1154 Pr = 0.000

With core expertise in developing monitoring and evaluation systems for fragile contexts and active conflict areas, CMC is a unique service provider bringing specific skills to the M&E of PVE interventions. Our work is tailored to:

- Understanding and dealing with the practical challenges of effective M&E of PVE in difficult and hard-to-reach environments,
- Delivering an extensive network of community-based actors, enabling both direct M&E and indirect Third-Party Monitoring (TPM) of PVE interventions,
- Developing context-sensitive PVE indicators.

CMC uses a tested methodological toolkit that puts local communities at the heart of data collection and analysis. People and communities know best what matters to them, and hold the key to understanding how and why violent extremism develops. Our approach to M&E provides clients with a decisive advantage, ensuring the impact and quality of PVE interventions on individuals and their communities.

CMC emphasizes a mixed methods approach using Key Informant Interviews (KIIs), Household Surveys (HHS), Focus Group Discussions (FGDs), direct observation and social media analysis. For our services, we rely on:

- Training and mobilization of community-based M&E enumerators charged with data gathering on PVE
- Professional, in-house analysts focussing on expert analysis of M&E in fragile states.
